

Pair 60KW ISUZU marine diesel generators. Running takeouts, excellent condition.

PRODUCT DESCRIPTION

Owner purchased John Deere gens when originally repowering vessel, but they were delayed and ran out of time, so he installed the Isuzu's to get the vessel up and running. Pulled the Isuzu in order to install the JD Gens he originally intended to use.

Solid running take outs. No reported issues. Engines were separated from the gens when pulling them. One rear seal reported to have a tiny leak, and the other seal reported to be "bone dry." One Gen has a new water pump and both have new fuel solenoids. Has spare parts as well. Approximately 18,800 hours.

They have been covered for a year.
