

3200 ST Drydock - Conversion and upgrade 2010

PRODUCT DESCRIPTION

Built originally as a 200' dock. 50' was added to both ends of dock in 2010. Major upgrade to control room at that time also. Added a generator and compressor. Dock is currently 300' x 74' x 6.5' 64' between the wingwalls. Some steel replacement recently. About \$200,000 spent. Dock could use some paint and some valve replacement. Owner has the valves and about \$40,000 for the work to be done. No estimate on the paint work. Replacement cost around \$6,000,000. Improvements on dock could be done on a negotiated basis if combined with acquisition of dock. All pics taken this year (2021).

Categories: [Shipyard & Marina Equipment](#)

Condition RTO

Additional Information If looking for smaller dock, we also have option of 1500 Ton Drydock.
