

Cummins 40,000 psi powered pressure washer

PRODUCT DESCRIPTION

It is an amazing machine but owners are not planning to use it anymore.

770 hours. Has not been operated since 2018.

2 guns, 2 bipods that connect the guns and 2 hoses. It was set up to use two wands, everything is there except the second lance. No consumables

A test run of the pressure washer achieved 32,000 psi. A running video was sent to NLB, who looked it over, and states there is definitely something wrong with the bypass valve, which is approximately \$4,000 for a replacement part.
