# Pair MAN 2840 LE401 Marine Propulsion Engines

---

## PRODUCT DESCRIPTION

Installed by MAN 2001/2002. Currently in the boat.

603KW (808HP) @ 2300RPM

Approximately 1,300 original hours.

One engine is together, and the other is taken apart.

When the 2nd engine was having the cylinder heads put back on, they found a hairline crack in one of the valves, face fracture. The cracked valve was due to engine hatch leaking. May need to take off a couple of parts to remove from the vessel.

Cannot be shipped into the U.S. complete, will need to be shipped in as parts.

Running video of engine 1 can be done with deposit.

ZF 350A 1.58:1
