Twin disc 5705a 2.5:1
Categories: Marine Engines
Engine Manufacturer/Brand Cummins
Engine Model QSC
HP 540
RPM 2600
Additional Information Engine history: Part of a sport fisherman purchase. Boat took water and leaned to one side. The now seized engine took water and the other only partially got wet. It was in brackish water. The 2nd engine that only "dipped" did not get any water in the turbo or anything.

They purchased the boat, then for peace of mind had the engines gone through and had new everything put on: heads, turbos, ECMs, etc. He did an oil change on both, and discovered water mixed with oil in now seized engine. The seized engine does not bar over.
