

Single Yanmar 6LPA Marine Propulsion Engine

PRODUCT DESCRIPTION

Manufactured June 2004. It has 403 Hours from factory new. It was in a welded aluminum boat that was about 30' long, operated in the Pacific, the owner changed to outboards. They pulled it to convert to outboards.

There are no maintenance records available. The owner did the refit, he did not own the boat. That is why he does not have the records. Oil change history is not known, but the oil in it is clean and it looks new inside the oil fill in the valve cover. Hoses and timing belt appear to be original, due to the fact the original yanmar paint looks undisturbed on the engine.

The harness on the engine is included, the extension harness that goes from the engine to the gauge panel will be included with the gauge panel if the gauge panel is desired. The panel is a C panel, available for an additional cost. The pigtail harness goes with the engine. The longer harness goes with panel. The gear is a Hurth 1.3:1, available at an additional cost.
